Ship class:Battle Cruiser

The dimensional relations of the Battle Cruiser class Klingon starship to the typical "Bird of Prey",so frequently encountered by Federation vessels is a far leap from any other enemy vessel ever documented.

Weaponry :

A.Phasers :The Klingon Battle Cruiser uses standard F-180 phaser banks for common battle tactics and operations.Plans for this equipment was inevitably stolen from Federation memory banks.

B.Photon torpedoes :The Battle Cruiser uses the MX-T41 High Velocity Enursia Control systems for the firing of its torpedoes.There are four varieties of torpedoes that are commonly used with this system.First the standard 241-A pulse charge torpedo.Next, the antimatter carriage, which carries a small load of antimatter which is released upon contact with the enemy vessel.Next, there is the electrical flux generating torpedo,which upon impact creates energy fluxuations great enough to shut down ship systems and render the vessel a lifeless,harmless hulk.And finally, there is the hollow cased torpedo tube which may be loaded with desired materials.

The cooling system encorporates thermal dampening coils.
